# Motility proportion over time — All and by species

Each panel uses a weighted GAM (weights = n/day in that panel) with 95% CI; points show culture-level spread

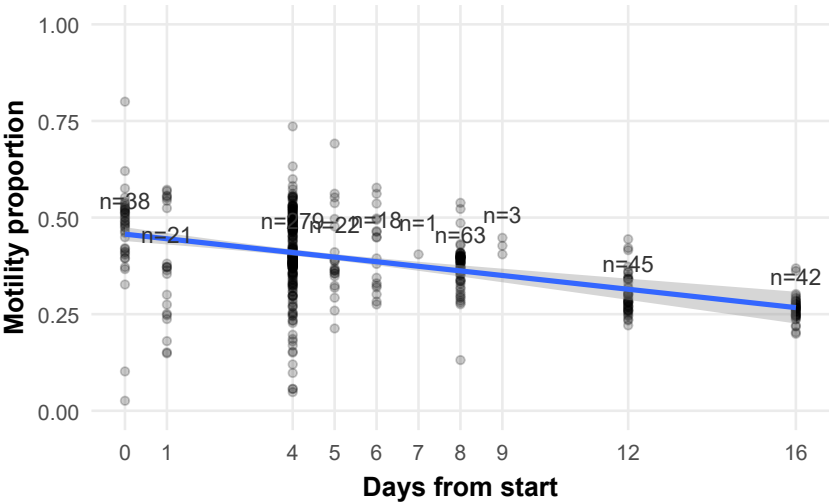

All species
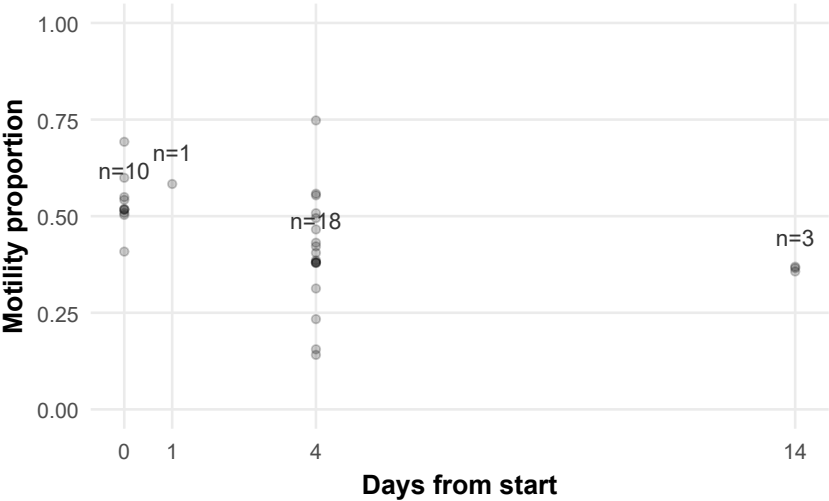

Weighted GAM (weights = total n/day) with 95% CI

L. digitata

Weighted GAM (n/day); Linear slope -0.012/day [-0.013, -0.010]; Δ% 0→

L. hyperborea

Weighted GAM (n/day); Linear slope -0.014/day [-0.026, -0.002]; Δ% 0→14 Weighted GAM (n/day); Linear slope -0.008/day [-0.016, -0.001]; Δ% 0→

S. latissima
